Department of Transportation physical exam

What the driver should expect

Before your appointment, you’ll be asked to fill out Section 1 (Driver Information) of the U.S. Department of Transportation (DOT) Medical Examination Report Form. Your medical examiner will fill out the rest of the form during the exam.

If your appointment is with Kaiser Permanente: Before your appointment, you’ll be asked to sign the Authorization for Use and/or Disclosure of Member/Patient Health Information form for disclosing your Kaiser Permanente records to the Occupational Health Clinic. This form gives your examiner access to your medical information so Kaiser Permanente can best support your health and wellness – helping you perform your job safely.

Top issues to see your primary care doctor about before your exam

<table>
<thead>
<tr>
<th>Sleep apnea</th>
<th>What the exam tests</th>
<th>What to do</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Definition</strong></td>
<td>When your breathing is often blocked or partly blocked during sleep. This can be mild to severe, based on how often your lungs don’t get enough air. May happen from 5 to 30 or more times an hour.</td>
<td>Your examiner will make an assessment to see if you have risk factors for sleep apnea. They may refer you for a sleep study that diagnoses sleep apnea and measures whether the severity may result in a lapse of consciousness, dizziness, fatigue, or decreased mental awareness that may interfere with your ability to safely operate your vehicle.</td>
</tr>
<tr>
<td><strong>Health risks</strong></td>

For more information, go to kp.org and search “sleep apnea.” (continues on next page)
### High blood pressure

<table>
<thead>
<tr>
<th>Definition</th>
<th>What the exam tests</th>
<th>What to do</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the pressure of the blood in your blood vessels is higher than it should be.</td>
<td>Tests whether your high blood pressure is decreasing to be &quot;under control,&quot; meaning below 140/90. Blood pressure greater than 180/110 is disqualifying. Blood pressure below 180/110 but above 140/90 will automatically shorten the period of certification.</td>
<td>Take blood pressure medication as prescribed by your primary care doctor. Eat a healthy diet low in salt, total fat, saturated fat, and cholesterol but high in fresh fruits and vegetables. Stay or become more physically active and aim for a healthy weight. If you smoke, quit as soon as possible. Contact your primary care doctor to create a plan for lifestyle changes.</td>
</tr>
</tbody>
</table>

**Health risks**
- Heart attack
- Stroke
- Eye problems
- Kidney disease

For more information, go to kp.org and search “high blood pressure” or “heart health.”

### Diabetes

<table>
<thead>
<tr>
<th>Definition</th>
<th>What the exam tests</th>
<th>What to do</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Type 2 diabetes:</strong> When your body can't make enough or properly use insulin.</td>
<td>Tests whether your diabetes is “under control,” meaning you keep your blood sugar levels as close to normal as possible through diet or oral medication. Exam may include:</td>
<td>Keep your blood sugar (glucose) levels well controlled by testing and taking medication as prescribed by your primary care doctor. Eat a healthy diet low in carbohydrates, salt, total fat, saturated fat, and cholesterol but high in fresh fruits and vegetables. Stay or become more physically active and aim for a healthy weight.</td>
</tr>
</tbody>
</table>
| **Type 1 diabetes:** When your pancreas stops making insulin. | • Urine analysis for indications of uncontrolled diabetes • Thorough review of vision and use of limbs, fingers, and toes | Requirements before the exam:  
• Within the 3 months before the exam, get an A1c blood test. Results must be within 7% to 10%.  
• Follow up with your primary care doctor periodically for diabetes management. Get an electrocardiogram (EKG) test every 2 years. |

**Health risks**
- Skin infections
- Eye damage (retinopathy, cataracts, and glaucoma)
- Stroke, heart disease
- Nerve damage (neuropathy), especially in the feet

For more information, go to kp.org and search “diabetes” or “key steps in diabetes care.”

## Medications that can affect driving

<table>
<thead>
<tr>
<th>Definition</th>
<th>What the exam tests</th>
<th>What to do</th>
</tr>
</thead>
</table>
| Use of opiates, amphetamines, narcotics, or any habit-forming drug that can impact your judgement and affect driving. | Evaluates whether you take a Schedule 1 drug in one of the following classes of drugs:  
• Marijuana  
• Cocaine  
• Opiates  
• Phencyclidine (PCP)  
• Amphetamines and methamphetamines | Contact your primary care doctor to create a treatment plan to help you manage your condition without medications that affect safe driving. |

**Health risks**
- Addiction
- Weakened immune system
- Hallucinations
- Coma

For more information, go to kp.org and search “medicine side effects.”

## Musculoskeletal injuries (that can be actively treated)

<table>
<thead>
<tr>
<th>Definition</th>
<th>What the exam tests</th>
<th>What to do</th>
</tr>
</thead>
</table>
| Often called repetitive strain injuries (RSI), these are injuries caused by damage to muscles, joints, or bones. | Tests whether there is any musculoskeletal condition that interferes with your ability to control and operate a vehicle. | When sitting for long periods, take a 10-minute break each hour or as often as possible.  
If possible, avoid periods of repetitive motion lasting longer than 10 minutes.  
Stay or become more physically active and aim for a healthy weight. Being overweight puts extra strain on weight-bearing joints like hips and knees.  
Contact your primary care doctor to create a treatment plan and discuss assistive devices to help with daily tasks. |

**Health risks**
- Aching, fatigue, and weakness of affected limbs
- Injury can become irreversible
- Can lead to inability to sleep and perform light duties

For more information, go to kp.org and search “musculoskeletal system” or “arthritis.”
